Description

Hello,
I'm interested in knowing when in the interview--before soliciting participation or after the interviews are completed--the interviewer makes the following observations:

h_rescond
h_hsfit
h_vicin1, 2 and 3

also, to confirm: h_ff_nonprod is derived from prior waves, correct? and h_urban_dv is reported from the interviewer or derived from geographic data?

History

- Private changed from Yes to No

Dear Dana,

They make these observations before making contact, so they are generally done when the interviewer is outside the address.

ff_nonprod is derived from the previous wave and the urban_dv is derived from geographic data based on the postcode of the address (and not from the interviewer).

We hope this helps, best wishes, Victoria.
