Description			
Hi,			
I am trying to use the BHPS sample to undertake longitudinal analysis on employment questions. To weight the data I have used the weight "br_indin01_lw". The weight seems to work and allows me to compare the data across waves. However, I would like to know how to get estimates reflecting the whole UK population?			
Thank you.			
Best, Pierre

- Target version set to BHPS
- Private changed from Yes to No

Many thanks for your enquiry. The Understanding Society team is looking into it and we will get back to you as soon as we can.

Best wishes,
Stephanie

Pierre,

All our weights are designed to represent the population. By using the weights your results become representative :)

Hope this helps,
Olena
