Dear Jingjing Wang,

Do you mean that more people dropped out of the Survey between Waves 1 and 4 than between Waves 4 and 7? This will mainly be because the second wave of a longitudinal study is likely to have a higher number of refusals than other waves. This (and response rates in general) is discussed in section 2.3.4 (in particular 2.3.4.2) of the Mainstage User Guide, which you can download here: <https://www.understandingsociety.ac.uk/documentation/mainstage/user-guide>

Best wishes,
Stephanie
