Description			
Hello,			
I was wondering how one should interpret the variables e_earninfo, e_pearinfo, and e_pearnewsletter? My interpretation for e_pearinfo was that any parent responding about a child eligible for the information treatment had a value of 1 here ("Press 1 and [Enter] to Continue") and then they could agree to or refuse the emailed information in e_pearnewsletter.			
However, I wasn't sure then if this carried over completely into the e_earninfo variable. My interpretation was that anyone who had a value that is not -8 received the information treatment (-2 or 1), and anyone who elected to have it delivered by email as well had a value of 1. Is this true (I assumed that earninfo and newsletter had been merged into one variable, but I'm not sure)?			
Thank you,			
Best, Sam

These look like typical intro items - that we rarely release. If you are interested in figuring out the routing, it would be safer to reconstruct the Boolean logic given in the Universe.
Jakob
