Description			
Hi,			
I would like to analyze a subset of all households who pay their gas/electricity/oil bills on seperate bills in wave 9.			
Can I apply the survey design packages from R the same way as I'd do with the complete data set?			
What weighting mechanisms would you suggest?			
Thanks in advance!			
A.

Antonia,

Yes, you can and should apply survey design adjustment for a subset just a you would for the whole population.

This video may help you in selecting the correct weight:

<https://www.youtube.com/watch?v=6xwrlUjmxts&feature=youtu.be>

and for more information see here:

<https://www.understandingsociety.ac.uk/2020/04/01/have-a-question-about-using-weights-in-understanding-society>

Thanks,

Olena
