Description

Hello,
I have accessed the geo-coded information at the LSOA level.
Why are there so many more cases in the a_lsoa_protect.dta file as compared to the a_indresp.dta file? (I was actually expecting to find less cases, that is, one LSOA code for each household...)
I am probably missing information, can you help me?
Thanks,
Carolina

Carolina,
The LSOA lookup is congruent with A_HHSAMP, the file containing data on all households in the Wave 1 sample whether they responded or not. The file A_INDRESP contains data on all the adult respondents. The match between the lookup and A_INDRESP reflects the subset of households with at least one adult respondent.
Jakob
