Calculating change in the extra 5 minutes sample size and sub-sample sizes waves 1 to 3

Description <p>Hello, I have been trying to calculate how the extra 5 minutes sample size changes from wave 1 to wave 3. Because the low density area identifier, gps comparison and ethnic minority boost identifiers aren't available in subsequent waves indresp files, I merged these in to the later waves indresp files from wave 1. After having done this I have two questions:</p> <p>1- Why do the totals of the LDA, GPS comparison and EMB samples add up to more than the extra 5 minutes sample total (using the extra 5 minutes identifier)? I found this to be the case for waves 1, 2 and 3.</p> <p>2- The extra 5 minutes sample appears to gain participants in waves 2 and 3 who weren't part of the sample in wave 1. For example, in wave 2 I found 6,223 extra 5 minutes sample members (but only 5,479 were from the original wave 1 sample). How did these new participants come to be included? (Apologies if this is detailed in a user guide somewhere, I have had a look but can't seem to find the detail on this).</p> <p>Any help on this would be very much appreciated</p> <p>Many thanks</p> <p>Natalie</p>

Hello Natalie,

The extra5min eligibility conditions do not apply to proxy respondents. So, if someone qualified as eligible for these questions but was a proxy respondent in Wave 1 but a full respondent in Wave 2, a_xtra5min_dv=-7 & b_xtra5min_dv=1
And similarly the other way round.

This should explain most of the discrepancies.

Best wishes,
Understanding Society User Support Team

Hi Alita

Thank you for your reply. Apologies if I am not understanding, I am still unsure as to why the LDA + GPS + EMB add up to more than the total extra five minutes sample total at wave 1? Waves 2 & 3 LDA + GPS + EMB add up to less than the number of extra five minutes sample members identified using the n_xtra5min_dv variable. Is this because proxy respondents are included in the n_xtra5min_dv identifier but not in the sub sample identifiers?

Best wishes

Natalie

Sub sample size table:

W1	W2	W3	
EMB	7,320	4,694	3,567
LDA	648	461	352
GPS	930	720	575
Extra5	8,161	6,223	5,483

- File Sub sample analysis of the extra five minute sample.docx added

Apologies, the table was in line when I sent the previous message.

I have attached it as a word document here instead.

Best wishes

Natalie

Yes. There are 8883 individual adult respondents who are either in EMB, LDA or GPC samples. Of these 722 are proxy. So, there are 8161 who qualify for extra 5 minutes.
