Description Hi, I was wondering whether it is possible to link the wave 4 youth SDQ responses to the parent pidp in the individual COVID survey? I could only find a pidp and no hidp in the youth file. Best, Charlotte

Many thanks for your enquiry. The Understanding Society team is looking into it and we will get back to you as soon as we can.

We aim to respond to simple queries within 48 hours and more complex issues within 7 working days. While we will aim to keep to this response times due to the current coronavirus (COVID-19) related situation it may take us longer to respond.

Best wishes,
Understanding Society User Support Team

You will have to link back youth data from Covid19 (cW_youth_p) to INDALL files in the main data (W_indall) which will include PIDP of their parents (W_fnpid & W_mnpid for biological parents OR W_fnspid & W_mnspid for bio/step/adop parents). You can use these identifiers to then link back to adult respondent file in Covid19 survey (cW_indresp_w) to link to their parents.

You will be able to identify the father or mother of all but 5 youths in cd_youth_p file. Then if you link with cd_indresp_w using these identifiers you will be able to find at least one parent in this file for 823 youths.

Hope this helps
