Description			
Hi,			
I am working with the April 2020 COVID-19 web survey dataset (ca_indresp_w) and was wondering if the question on time spent on childcare or home schooling (timechcare) was answered only by parents or also by those who are not parents but have children (other than themselves) in their household. I read in the user guide that for the home schooling module "To identify unique children and their Understanding Society pidps, from parents' responses, children were linked to the main Understanding Society datasets" and "Respondents aged 16-18 who answered the module for themselves or for siblings were removed. Any children below school age, i.e. born after August 2015, were also removed since they should not have been reported in the module on home schooling". Was this done for the timechcare question too given that it is in the time use module not the home schooling module ?			

History

- Private changed from Yes to No

Hello,

In the cW_indresp_w files, no responses were removed because of this reason (and that includes the timchcare questions). Only in the cW_schild files, for reasons you outlined here some responses were removed.

Best wishes,
Understanding Society User Support Team
