<b>Category:</b>	Survey design		
<b>Description</b> <p>For my PhD data collection that's beginning next week, I'm interested in using some of the questions asked in the UK Household Longitudinal Study around satisfaction with different life domains (I believe they are: sclfsat1, sclfsat2, sclfsat7, sclfsato and then the one that asks about job satisfaction too which I can't find the code for) to tie my small-scale in-depth mainly qualitative project with other studies that have used data from your database.</p> <p>I wanted to a) check that this would be okay, and b) ask how these questions have been designed? Have they been taken from an accepted standardised scale, been tested, or been through some kind of psychometric validation process?</p> <p>Thank you for your help.</p> <p>Will</p>			

#### History

Many thanks for your enquiry. The Understanding Society team is looking into it and we will get back to you as soon as we can.

We aim to respond to simple queries within 48 hours and more complex issues within 7 working days. While we will aim to keep to this response times due to the current coronavirus (COVID-19) related situation it may take us longer to respond.

Best wishes,  
Understanding Society User Support Team

Hi there,

I just wanted to get in touch to ask whether there has been any progress on the below?

Many thanks,

Will

- Status changed from In Progress to Feedback
- % Done changed from 10 to 80

Dear Will,

The life satisfaction and satisfaction with other domains were introduced in Wave 6 of BHPS and were modelled on the job satisfaction (and satisfaction with other job features) questions. These questions were carried forward into Understanding Society.

During the 1st wave of the Innovation Panel, the 7 point scales were tested against the 11 point scales (used in many other longitudinal studies) and as there was no advantage of using the latter, the 7 point scales continued.
