pensioner_dv seems to be wrong for men

Description Hi, The pensioner_dv variable is supposed to determine whether the respondent is past State Pension Age (SPA). But for men, in wave K, all men aged 64 or younger are defined as not being past SPA, and all men aged 65 or older are. However, men born after 6 December 1953 have a SPA after their 65th birthday (https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/310231/spa-timetable.pdf) For women this does not seem to be a problem - at least, there are 65 year old women in wave K for whom the pensioner_dv variable says they are below SPA. (Though, there are 36 women in wave K who are 60 years old and pensioner_dv indicates that they are past SPA. Presumably that can't be right?)

Hi Tom,

We have passed this to our Data Team who are now investigating this discrepancy. We will keep you updated.

Best wishes,
Understanding Society User Support Team
