Description			
Hello!			
I am currently using cd_schild_w.dta dataset from COVID-19 wave 4 (June 2020). I have noticed that after many variables there are _m or _f ending. Could you please tell what is the difference between them?			
Thank you!			
Kind regards, Irina			

History

- Status changed from New to Feedback
- % Done changed from 0 to 100
- Private changed from Yes to No

_m stands for mothers, _f for fathers. Please see section 14.2 "July 2020: Special Education Needs (SEN) and Strengths and Difficulties Questionnaire (SDQ) (ages 5-17)" and Table 14.1 "Suffixes used in SCHILD files to identify who provided answers" in the Covid-19 user guide for further details.

Best wishes,
Understanding Society User Support
