Description			
Hello Can you please confirm the following: if a household consists of two members eg a married couple, does the survey contain responses from both members? For example, can we get the cognitive ability measures for both partners? Thanks Thanos			

History

#1 - 05/03/2022 12:53 PM - Understanding Society User Support Team

- Status changed from New to Feedback
- % Done changed from 0 to 80
- Private changed from Yes to No

All 10+ year old members in a responding household, are eligible for interviews - 10-15 year old for the youth interview and 16+ for the adult interview. In your example if both partners participated in the adult interview then you will have data from those interviews for both of them. In other words, even if the household is a responding household, each hh member eligible for the youth or adult interview is asked additionally whether they would like to participate in that specifi (yout/adult) interview. And if they say yes, then we have data for them from those interviews.

Hope this helps.

Best wishes,
Understanding Society User Support Team
