Description			
<p>I could do with some advice re: which weights to use for the COVID module Waves 2 & 6 (that have both web and telephone surveys). According to the documentation, I should be using the <code>_xw_t</code> weights. When I compare the two values, I notice that for wave 6, the <code>_xw_t</code> weight field is missing for a lot of my sample (16-19 year olds).</p> <p>I have attached two screenshots as examples of what I mean.</p> <p>Any advice would be most welcome. Thanks!</p>

Thanks for letting us know. Could you please email us at usersupport@understandingsociety.ac.uk and our weighting team will send you the Stata syntax to produce the corrected value of these weights.

#3 - 11/08/2022 01:38 PM - Understanding Society User Support Team

- Status changed from In Progress to Resolved
- % Done changed from 10 to 100
- Private changed from Yes to No

We have received your email and passed that on to the weighting team. As the conversation is now continuing via email setting this to resolved.
