Description			
Hi,			
I have been trying to merge the newly-released version of PEACH (2009-2021) to the core file (indresp, W1-W12). I have tried a couple of times and some troubleshooting too, but I can only match a handful of IDs (20 or less). I am using pidp_q3/5/8 to merge the information from PEACH to the parent (pidp) in the core file. I am merging by ID and wave, but I encounter the same problem if I only merge by ID. The same code worked fine with the beta version of PEACH.			
Thank you in advance for having a look into this, I really appreciate it!			
Best wishes

Dear Gabriele,

We have identified a major issue with the data - a lot of pidps are incorrect. Please refrain from using the data until we fix the issue, we will re-release the dataset via the UKDS website when the correct version is ready. We are very sorry for the inconvenience.

Best wishes,
Piotr

Dear Piotr,

Thanks for your quick reply! I have now deleted this version of PEACH and will use the new one upon its release.

Best wishes,
Gabriele
