Description Hi, In wave 2 there are questions about 'how important is ### to your sense of who you are' - q22 in the self-completion questionnaire and 'b_scwhoru###' in the SPSS datasets. It says that these items were source from the Citizenship survey. I'm getting a bit confused here - does this mean that the data are the same as from the Citizenship survey for these items (i.e. the same respondents), or does this just mean that the wording for the item was taken from the wording used in the Citizenship survey? Thanks, Matt

The module is carried again at Wave 5. From the Wave 5 questionnaire documentation you can see that the source is the Citizenship Survey. This is the source of the wording for the items.
