Description			
Dear colleagues,			
I am a Sociologist at the DemoSoc Research Group (Universitat Pompeu Fabra) I'm currently doing research on gender differences in graduates early labour market trajectory. Among the controls to introduce in my analysis, I am considering a summary measure of cognitive ability. I see that there are many variables that were generated in Wave 3. Was there any attempt to summarise them in a single measure, or to reduce the dimensionality of the analysis?			
Thanks for your attention			
And kind regards			
Luis Ortiz-Gervasi

Hi Luis,

In addition to the raw data from this module a set of derived variables is included, you can find the list here:

https://www.understandingsociety.ac.uk/documentation/mainstage/dataset-documentation/term/cognitive-ability/term/derived-variables?search_api_views_fulltext=cognitive , but no single measure of cognitive ability is available.

Best wishes,
Piotr Marzec,
