Description			
To who it may concern,			
I am currently using UKHLS covid wave 7,8,9 to conduct research. In the questionnaires, jbsoc variable exists in these three waves, but in the data file, I can only find it in wave 8.			
Also, there is no derived industry variable, and I found the question in wave 8 is checking the industry in wave 7 and in wave 9 is checking either wave 7 and wave8. In this case, can I get the information by firstly derived one industry variable for wave 8 and then another one for wave 9.			
The last part is regarding the marriage/cohabitation status. Can I generate a variable based on household relationships? But what if they get married but not living together? According to the way UKHLS suggests finding a partner or spouse, does it mean we can only identify a spouse or partner for couples living together that have the same household address?			
Would you mind helping me with this issue, please?			
best shiyu

- % Done changed from 0 to 50

Hello,

These variables were dropped due to some inconsistencies we had discovered. There is a plan to release them with an instruction on how to use them, let me check with the Covid team what the timeline for that re-release is. In the meantime, you consider linking the information on occupation and industry from the main study.

I will also check the marriage question and get back to you.

Best wishes,
Piotr,
UKHLS User Support
