Importing data to R - converting from wide to long error

06/20/2023 10:18 AM - Matthew Clark

Status: Resolved	Start date: 06/20/2023
Priority: High	% Done: 100%
Assignee:	
Category: Data documentation	
Description I've been trying to read in data (a stata file) in R, tidy and convert from wide to long format using the code shared below: https://www.understandingsociety.ac.uk/sites/default/files/downloads/documentation/mainstage/syntax/r/r-merging-indresp-hhresp-all-waves-long-format.R However I keep getting an error when trying to convert from wide to long (Error in 'vec_cast.haven_labelled.haven_labelled()': Can't convert from 'value' <labelled<double>> to <labelled<double>> due to loss of precision) - see attached screenshot. Has anyone come across this issue before? Does anyone know a solution? Matt

Dear Matthew,

This is a user deposited file, I am afraid we do not provide assistance for these files. Please contact Dr. David Bartram (University of Leicester) at d.bartram@leicester.ac.uk who deposited the file.

Best wishes,
UKHLS User Support Team
