Description			
Hello, My question is about the variable "dweltyp" in the hhsamp files. - Why are so many households reported as "-8" or "inapplicable" from Wave 7 onwards in the Understanding Society (USoc) data? - How is "dweltyp" different from the "hstype" variable that was included in the BHPS? - Why are there no inapplicable responses prior to Wave 7? Thanks!			

History

#1 - 07/12/2023 03:54 PM - Understanding Society User Support Team

- Category set to Data documentation
- Status changed from New to Feedback
- % Done changed from 0 to 90
- Private changed from Yes to No

Hello,

- 1) this was due to online interviewing being introduced in wave 7, in the web only households this information was not collected, thus -8
- 2) dweltyp and hstype are similar questions, though the list of categories for dweltyp is more exhaustive

I hope this helps.

Best wishes,
Piotr Marzec,
UKHLS User Support
