Description This question is on the variable a_Imend (how marriage/ civil partnership ended) in the first wave of Understanding Societies: the third category (97 'something else') of the variable a_Imend consists of a fairly large amount of respondents (1.237 / 9%) and I was wondering why such a large amount of respondents belong to this category. So, when do respondents get a value of '97' on the a_Imend variable? Many thanks.			

History

- Category set to Data analysis
- Status changed from New to In Progress
- % Done changed from 0 to 50

the 'something else's might be those people who have separated but not officially divorced – but for them the marriage has ended.

Jakob

PS Apologies for taking so long to answer this request. The good news is that we will soon be able to release another wave's worth of data.
