Description			
Hello, i have been asked to provide information on the model used to calculate the cross-sectional weighs for the youth surveys in understanding society - can you help? What variables were used for non-response? Thanks

- File 6614_waves1_to_9_user_guide_2019.pdf added
- Category set to Weights
- % Done changed from 0 to 50
- Private changed from Yes to No

Hi Matthias,

I would recommend checking the following documents online:

<https://www.understandingsociety.ac.uk/wp-content/uploads/working-papers/2010-05.pdf>
<https://www.understandingsociety.ac.uk/wp-content/uploads/working-papers/2024-01.pdf>

and an older version of our user guide that includes a more technical description of weight in UKHLS (attached).

If the above doesn't answer all your questions, please don't hesitate to ask.

Best wishes,
Piotr Marzec
