Description			
Hi,			
I want to conduct analysis into the impact of racism on health inequality. The racism questions that I am interested in were conducted as part of the extra 5 minute sample. I have used the following syntax svyset a_psu [pweight=a_ind5mus_xw], strata(a_strata) vce(linearized) singleunit(missing) from the survey data setting drop down menu in Stata 13. I just want to double check that I have used the correct weights etc.			
Best wishes,			
Stephanie

Yes, that is the probability weight for extra 5 min questions at wave 1. More on this can be found weighting section of the user guide (e.g. Table 14); <https://www.understandingsociety.ac.uk/documentation/mainstage>
