**Description**

Dear sir/madam,

The documentation on the understanding society website reports that the max value of b_fimngrs_dv (in data file b_indresp) is 165987.203, however there is a discrepancy with the actual stata dataset. Using the dataset b_indresp on stata, the variable b_fimngrs_dv shows a max value of 15000. This is the same max value for a_fimngrs_dv and c_fimngrs_dv. Is this discrepancy an error? Please advise.

Thanks,
David

Looks like you've got the End User Licence version of the data. Please see the special licence FAQ here;
https://www.understandingsociety.ac.uk/support/projects/support/wiki/Which_variables_are_released_under_Special_License
