Description I'm new to the Understanding Society dataset, although I have used the BHPS dataset in the past. I'm wondering if there is a way of finding out exactly which variables are in Understanding Society (similar to the Index Terms on the BHPS website).

Abita,
UKHLS has, as something new, a much improved search facility

<https://www.understandingsociety.ac.uk/documentation/mainstage/dataset-documentation>

You can search across variables, files, modules, and questions. The search will include any word in the labels of variables as well and allow you to drill down to the original questionnaire content.

We hope you will find it useful. We are of course also interested in receiving suggestions from users to how this part of the documentation could be developed further in the future.

Jakob
