Description Hi, Are there boost samples for ethnic in Innovation panel? Since I cannot find the information about it, thank you. Besides, I've checked a_psnenip_xd (cross-sectional person design weight), the value ranged from 1 to 4. However, the frequency table on the website is only 1, I would like to know what make them different, thank you. And since the Innovation Panel sample is a equal probability design, why there are different design weights for individuals. Thank you. https://www.understandingsociety.ac.uk/documentation/innovation-panel/dataset-documentation/wave/1/datafile/a_indresp_ip/variable/a_psnenip_xd

Hsin Chen,

There is no ethnic boost in Innovation Panel. And IP is not an equal probability sample - the range from 1 to 4 corrects for the situations with multiple households per dwelling and multiple dwellings per address.

Hope this helps,
Olean
