Description

Hello!

I was very interested in the variables concerning the "Self-completion Best Friends module". However, when I looked for such variables in the dataset, I could not find them (I used the stata command "lookfor friend"). Also, on the website it is not indicated the name of the variables that are supposed to be associated with the questions, but only the wording of the questions and their category answers (
https://www.understandingsociety.ac.uk/documentation/mainstage/dataset-documentation/wave/3/questionnaire-module/scabestfriends_w3).

History

#1 - 10/16/2014 07:59 AM - Redmine Admin

- Category set to Data releases

- Target version set to M3

The variables from this module will be in the revision of Wave 3 expected for release this November.
