Description			
Hello,			
There are 565 households in the above file which do not have weights (b_hhdenub_xw). Can you tell me the reason for this? These households have individuals with data that have been sampled in the individual file (b_indresp).			
Further, there are 10 people in the individual file who cannot be matched with data in the household file, because their households do not have records. These are the b_hidp numbers that were not found in the household file.			
b_hidp 1436119202 1362862802 1297691602			
Thank you, Dharmi

Further, there are 10 people in the individual file who cannot be matched with data in the household file, because their households do not have records. These are the b_hidp numbers that were not found in the household file.

The issue is that for a small number of households one or more adults were interviewed, but the household questionnaire was not filled out. These households can be only be identified using this fieldwork household outcome code:

```
b_outcome = 214 "completed individual interview(s) but no hhold [interview]"
```

The weighing question will be answered separately.

Regarding the weighting question, these are households that do not contain any individual with a non-zero longitudinal weight.

For details, see sections 3.7.3.7 and 3.7.3.8 of the User Guide.

Peter
