| <b>Description</b>   |            |                    |            |
| Hi,  |            |                    |            |
| we are currently thinking of a few studies with recent immigrants and would like to first see what we can do with existing databases. We would be most grateful if you could help us with the following questions: |            |                    |            |
| 1. From the existing database in understanding society, is it possible to get participants' (recruited from boosted ethnic groups) plasma oxytocin level (which is measured from blood)?                           |            |                    |            |
| 2. For these people, is it possible to contact them to get psychological measures over some time period (separate from the understanding society survey)?  |            |                    |            |
| 3. How many of the recruited ethnic minorities can be classified as relatively recent immigrants (arrived in the last 1-3 years)?  |            |                    |            |
| Apologies if some of these questions fall outside of what you can answer. I wasn't sure how detailed your answers can be.  |            |                    |            |
| Many thanks in advance for your assistance.  |            |                    |            |
| best regards   |            |                    |            |
| Ayse   |            |                    |            |

1. From the existing database in understanding society, is it possible to get participants' (recruited from boosted ethnic groups) plasma oxytocin level (which is measured from blood)?

The ethnic minority boost sample members were not invited to the health assessment. Please also see <https://www.understandingsociety.ac.uk/about/health/data>

2. For these people, is it possible to contact them to get psychological measures over some time period (separate from the understanding society survey)?

Several included in the standard questionnaires. Please also see <https://www.understandingsociety.ac.uk/research/get-involved/associated-studies>

3. How many of the recruited ethnic minorities can be classified as relatively recent immigrants (arrived in the last 1-3 years)?

yr2uk4 was asked at Wave 1 and of new entrants each wave and released together with the date of interview;
