Description I have a question about the Associated Studies aspect of Understanding Society. I understand that the sample available for the Associated Studies is the Innovation Panel. Can I please check whether the Innovation Panel includes a large sample of people from minority ethnic groups? From my reading of the website I think that it does not, but I'd like to double check. If not, is there any alternative way of engaging with the data collection of the minority ethnic boost sample? Thank you.

Opposed to the Mainstage study, the Innovation Panel does not at present count any ethnic minority boost samples. Associated Studies can in principle be integrated into either study. However, there needs to be a justification for integrating an associated study with the Mainstage rather than the Innovation Panel study per se. For further information, please see; www.understandingsociety.ac.uk/research/get-involved/associated-studies
