Description			
This is a question about spatial data available in US. I understand that home postcode is available in the secure data release, and we would just like to confirm that no other location data is available. Specifically, the postcode of place of employment (if employed).			
Many thanks, T

Whilst we don't collect any identifiable data on work places, we do collect employment and commuting-related information. What type of information are you ultimately looking for?

On behalf of the team,
Jakob

Greetings Jakob,

We are hoping to define possible routes travelled by participants to estimate what kind of neighbourhood features they may be exposed to when travelling between work and home using a GIS and a database of neighbourhood features (i.e. stores and services). If home and work postcodes were available (along with commute mode), we may be able to estimate different routes (i.e. specific streets used to commute) that were taken.

Unfortunately, we are currently not able to support analysis that depends on knowing the exact location of both home and place of work.

On behalf of the team,
Jakob
