Description

Hi,

I have a question about the precise calculation of income variables such as hhnetinc1 (total household net income - no deductions) or prfitb (total personal income). In particular I'd like to know what the individual components are that go into the calculation. I've check the website and the documentation, but I haven't been able to find more information about. Any guidance would be appreciated.

Many thanks,
Andreas

History

#1 - 09/01/2015 05:03 PM - Redmine Admin

- Category set to Income

- Target version set to X M

- % Done changed from 0 to 10

We are currently working on the documentation and should be able to provide more detail in a few weeks' time.
On behalf of the team, Jakob

#2 - 10/22/2015 09:21 AM - Redmine Admin

- % Done changed from 10 to 50

We will be providing more details on the income variables in the user guide to the forthcoming release. Please also note that prfitb is a direct question and not a composite income variable.
On behalf of the team, Jakob

#3 - 10/25/2015 08:12 PM - Laura Jones

Could I please ask whether housing benefit received by the household goes into hhnetinc1?
many thanks,
Laura

- Status changed from New to In Progress

- % Done changed from 50 to 80

Laura,
Yes, housing benefit reported on the income file is included in hhnetinc1. However no allowance is made in hhnetinc1 for the rent rebate/housing benefit reported implicitly in the household questionnaire at questions w_renthb and w_rentg.

Thank you, and I presume that the deductions referred to hhnetinc3 do not include housing benefit?

#6 - 10/27/2015 12:02 PM - Redmine Admin

- % Done changed from 80 to 90

No, housing benefit reported on the income file is included in hhnetinc1 as well as hhnetinc3. On behalf of the team, Jakob
