Description			
Hi there,			
I want to compare orga and orgm of wave 3 but I can't do this as they are not both representative of the whole sample. I need to know how to make orgm representative by learning how to include the 'no's from c_org.			
Can you help me?			
Thanks,			
Olivia

Hello,

c_orgm is asked only of those who chose c_org=1. Just replace c_orgm* = 0 if c_org=2.

In case of c_orga* variables this is not a problem because it is asked of everyone and not filtered on any other question. See the "Universe" below the question to find out is asked.

Best wishes,
On behalf of the team
