Description			
Hello,			
For a lot of variables in the survey, there is a value 'inapplicable' for the majority of them. Can you please explain the meaning of 'inapplicable' and if there is a way o recover that information from the observations showing that value?			
Thank you very much			

History

- Private changed from Yes to No

Not everyone gets asked every question. They only get asked the questions that are relevant to them. For example, a person who is not in paid employment will not get asked questions about her job. The value for usual monthly wage variable (PAYGU_DV) will be -8 (inapplicable) for this person.

Best wishes,
Alita
