Category:	Data inconsistency		
Description			
Hello,			
In the file a_natchild the variable a_childno records every child listed by a given adult. However, some of those children listed by the same adult share the same identifier code (a_chno). That is, there are repeated children identifier codes for a given adult (repeated observations with identifiers a_hidp a_pno a_chno). Is there something am I missing or is it an error? This is something that occurs too in the file a_adopt.			
Thank you very much in advance.			
Paulino

Hi Paulino,

Thanks for letting us know. We are looking into this.

Best wishes,
Alita
