Description

Hi,

I am trying to work out the routing for some of the employment variables and for some variables, the routing in the questionnaire doesn't seem to match the routing in the data.

1. In wave 1, the routing stated in the questionnaire for a_jbhad is:

```
IF JBHAS = 2 AND JBOFF = 2
```

However, when I do the following (stata code):

```
gen route = a_jbhas==2 & a_jboff==2
tab a_jbhad route
```

I get the following:

ever had paid	route		
employment	0	1	Total
missing	0	29	29
inapplicable	26,525	1,190	27,715
proxy respondent	2,036	1,226	3,262
refused	0	2	2
don't know	0	14	14
yes	0	16,108	16,108
no	0	3,864	3,864
Total	28,561	22,433	50,994

So there are 1190 observations that look like they should have been asked jbhad but were not. Why is this? Am I missing something in the routing?

2. The routing for b_jbbgd/b_jbbgm/b_jbbgy is the following:

```
IF (JBHAS = 1 OR JBOFF = 1)
AND IF (FF_IVLLOLW<>1 & FF_EVERINT<>1)
```

However when I do the following (stata code):

```
gen route = (b_jbhas==1|b_jboff==1) & (b_ff_ivllolw~=1 & b_ff_everint~=1)
tab b_jbbgy route
```

I get this:

year started	route		
current job	0	1	Total
missing	0	1	1
inapplicable	50,010	1,982	51,992
don't know	0	16	16

So there are 1982 observations who do not get asked the date that their current job started even though they have never been interviewed before. Why is this? Again, am I missing something?

Thanks.

Hi Zoe,

on your query regarding a_jbhad. In Wave 1 JBHAD had the following routing:

if (JBHAS = 2 and JBOFF = 2)

if ((months 1-6 and if any LESHST is 1-3) or (months > 6))

This is currently not apparent from the questionnaire and we will update this as soon as we can. In the meantime, you can use the information from the employment history file to construct the indicator for whether or not a person has ever had a job.

On you second query, I looked at the questionnaire for Wave 2 and it says that the separate year, month and day variables were only asked

If (JBHAS = 1 OR JBOFF = 1) // Has a job

And If ((ff_ivlowlw <> 1 & Ff_everint <> 1)) // New entrant never interviewed

And If (ANY JBBGDBat = DK) // Full date started current job not known

It may be that the cases you have pointed out as inconsistent do not fulfil the third criterion. JBBGDBat is not included in the released data so it will take us a little bit of time to investigate this. Please bear with us.

Cheers,

Gundi

- % Done changed from 50 to 100

Dear Zoe,

further to my previous reply, I can now confirm that there has been a data processing error in Wave 2. The start date for respondents who knew the exact date, stored in JBBGDBat, has not been processed. We will fix this error for the next data release. The error only occurs in Wave 2.

Thank you for making us aware of the issue!

Best wishes,

Gundi

Hi Gundi,

Thanks for your reply.

Do you know when is the next data release schedule for?

#4 - 06/08/2016 09:24 AM - Gundi Knies

Hi Zoe,

the next release is planned for end of November 2016. We publish the latest plans here

<https://www.understandingsociety.ac.uk/documentation/data-releases>

Best wishes,

Gundi

#6 - 10/30/2023 11:28 AM - Alena Oxenham

Hello,

I am trying to look at participants' start date of their current job. In the Wave 12 questionnaire, it looks like "jbbgdat" was used, however I can't find this variable in my dataset or in the variable search tool. I looked at the jbbgd/m/y variables, but they have ~98% inapplicable responses. Is there a different variable I should be using to look at employment start dates?

Thanks!
Alena

- Status changed from Closed to Resolved

Hi Alena - you have raised the same question in <https://iserredex.essex.ac.uk/support/issues/1988> and we have answered that post.
