Description			
Hi there			
I am looking for a variable Nationality / Citizenship in the BHPS. So far I only found Country Born or Citizenship in 2 Waves. I need it for every year starting 1991/2 until 2005.			
Is there a personal identifier, which allows me to expand "citizenship" over the years? What can I do?			
Thank you for Your help Matthias

The individual cross-wave identifier is PID. You can use that to attach these variables to all waves.

Alternatively you can use the file XWAVEDAT. This is an individual level flat file, each row uniquely identified by PID. Time-invariant information collected at different waves (generally, the first time a person is interviewed) is put here. You can find PLBORNC PLBORND CITZN1 CITZN2 variables here. You can then merge this file to any wave file using PID

Best wishes,
Alita
