<b>Description</b>			
I would like to know how many new births there are for the sample, in each wave.

Hi Emma,  
please take a look at table 66 in the Understanding Society Quality Profile. It reports, among other stats, how many women reported to have had a pregnancy since the last interview and how many males have reported to have fathered a child since the last interview. The information is collected in the individual response files (\_INDRESP). The enumeration files (\_INDALL) furthermore include the variable \_NEWMUM and \_NEWDAD which assume a value of one if the enumerated person is the biological parent of a new born new entrant to the sample, and the files \_NEWBORN include information about new born sample members. Probably best to look at the data so you can compute a newborn indicator using a definition that works for whichever analysis you plan to be doing.  
Hope this helps.  
Best wishes,  
Gundi
