Description			
<p>My research topic is about the labour force participation, and so I collected some dataset from BHPS dataset, I have UKDA 5151 dataset and separated some variables I use in the analysis. But I would like to apply for this dataset using GMM, Fixed effect or other methods. I am using Stata 14.1 program for windows.</p> <p>In UKDA 5151, I will use only `indresp` and 1-18 waves together...</p> <p>1- Before analysis this dataset, do we have to merge this dataset? so I do not know what to merge in STATA ?</p> <p>2- After merge process for dataset, can we analyse for our commands to these datasets?</p> <p>3- Do you have any internet address for how to merge these datasets or link, or brochure or do file?</p> <p>I attached my variables and model. If you help me for this issue, I am glad for this.</p> <p>Thanks</p>

Dear Dr. Bolat,

I assume this is a duplicate of your earlier issue to which we responded yesterday?

We provide online training to use the BHPS with Stata. This provides an overview of the survey, the data structure and also guides you through how to create datasets for different kinds of analysis. See here: <https://www.understandingsociety.ac.uk/documentation/training>

If you have further questions please continue to use this online User Forum to raise issues.

Best wishes, Victoria.
