Description			
When merging wave 6 individual respondents(all f_indresp records) to wave 6 household respondents (all f_hhresp records) using f_hidp as key, I fail to find the corresponding hh for 799 individuals. Which never happens in the other waves. How can this be explained?

Dear Francesca,

Many thanks for your enquiry - the team is looking into it and will respond as soon as they can.

Best wishes, Victoria.

Hi Francesca,

there were always some individuals for whom we do not have a household interview. Until Wave 6 this was the case only for a small number of cases so it was decided to suppress the individual interviews. In Wave 6 the number was quite substantial so the decision was made to not exclude the individual interviews when there is no household interview record.

Hope this clarifies.

Gundi
