Description Hello, I'm interested in knowing when in the interview--before soliciting participation or after the interviews are completed--the interviewer makes the following observations: h_rescond h_hsfitt h_vicin1, 2 and 3 also, to confirm: h_ff_nonprod is derived from prior waves, correct? and h_urban_dv is reported from the interviewer or derived from geographic data?

Dear Dana,

They make these observations before making contact, so they are generally done when the interviewer is outside the address.

ff_nonprod is derived from the previous wave and the urban_dv is derived from geographic data based on the postcode of the address (and not from the interviewer).

We hope this helps, best wishes, Victoria.
