<b>Description</b> I wish to check that I have adopted the correct weighting variable for using the retrospective histories. I have assumed that a_indinus_xw would be the correct one as I am only using women aged 16 years and over, and have excluded proxy responses but would welcome confirmation of this.

- % Done changed from 0 to 50

yes, and a\_indinus\_xw (interviewed individual cross-sectional weight) is zero for proxy responses, so you should get the same results whether you exclude proxy responses or not in weighted analyses.
