<b>Description</b>			
<p>I am writing in respect of your data set a_indrep.sav as available via UK Data Service. I noticed that in this wave you asked respondents questions from the Spanier dyadic adjustment scale - variables labelled as follows:</p> <p>a_screlparei a_screlparcd a_screlparwt a_screlpards a_screlparrg a_screlparar a_screlparir a_screlparks a_scparoutint a_screlhappy</p> <p>I am currently working on a research project which too uses this scale and I was wondering if you could point me in the direction of any publications that have analysed the results of the answers to these questions in your data set? Were they specifically added to the survey for a particular project?</p> <p>Many thanks, Sharon</p>

Dear Sharon,

These variables were not added for a specific project, but they have been used by Relate. You can read about the study and link to their report here: <https://www.understandingsociety.ac.uk/participants/case-studies/relate>

Dear Sharon,

A colleague has let me know about two more publications using these variables:

- 1) The social context of parenting: mothers inner resources and social structures - Research Papers in Education
- 2) Marital status, relationship distress, and self-rated health: what role for 'sleep problems'? - Journal of Health and Social Behavior

Best wishes,

Thank you Stephanie,  
That is really helpful. I will take a read and see how the data was used and log a new query if we decide there is further analysis that may be useful for our project.  
Best wishes,  
Sharon
