| Hi, could you please explain the difference between sf1 and scsf1. My understanding is that sf1 was asked face to face, whereas scsf1 was a self assessed form respondents had to complete. However for waves 6 and 7, the sf1 variable largely reports respondents answers as inapplicable (-8). Could you please explain this? | | | |

Hi Oliver,

to reconstruct the inapplicable codes in specific waves and variables you need to check the questionnaires, particularly the universe information provided therein. In Wave 6 you can see the following info for sf1:

Universe

If (GRIDVARIABLES.modetype = 1) // Mode is face-to-face

And If (IProxy = 1) // Able to do a proxy interview for respondent

The question is inapplicable to everyone to whom this condition does not apply. I trust this will also be the case in Wave 7.

Hope this helps,
Gundi
