Description			
Dear all, I am a new user of understanding society, so pls apologize if my question is quite basic. I am trying to merge the wave1 and wave2 data, i.e. merging "b_indresp.dta" and "a_indresp.dta". Using merge function in stata (the stata code is 'merge 1:1 pidp using ... '), I found 38388 participants were both in wave1 and 2, 162019 were new entrants in wave 2 and 12606 were in wave 1 only. Then I look at those who have been interviewed before, by 'tab b_ff_ivlowlw', I found 46164 individual had previously been interviewed. This is bigger than 38388 I obtained beforehand. Do I miss something here or misunderstood with the b_ff_ivlowlw?			

History

- Target version set to M2
- % Done changed from 10 to 70

Dear Eduwin,

Looking at the variable b_hhorig will help you to answer this question. This is the sample origin. If you look at this variable for those who have b_ff_ivlowlw==1 (they have had a previous individual interview) but are not in a_indresp, you will see that almost all of these are BHPS sample members, so their previous interview was during BHPS data collection, rather than Wave 1 of Understanding Society.

Best wishes,
Stephanie Auty - Understanding Society User Support Officer

#4 - 06/14/2018 01:18 PM - Eduwin Pakpahan

Thanks a lot, Stephanie.
I understand now the "previous wave".

Rgds,
Eduwin
