Category:	Data analysis		
Description			
I only found variables that contained the number of children in a household, however I would like to know the number of children a person is parent to for every person in the dataset. Is there a way to find that out?

Judith,
The file INDALL contains different family relationship variables.
A description of these 'pointers' can be found in the latest user guide, <https://www.understandingsociety.ac.uk/documentation/mainstage/>
see e.g. hgbiof
The file EGOALT may also be of interest.

Jakob
