Description

Dear US User Support,

I have a minor question on the recode of jbxpcha and jblkcha questions, but, since I am dealing with small samples, I need to ask.
I cannot understand why there is the value of 3 and what it means (whether it should have been 2, but it is wrong or others).
If you could clarify, this would be helpful.

Thank you.
Best,
Lydia

- Private changed from Yes to No

Many thanks for your enquiry. The Understanding Society team is looking into it and we will get back to you as soon as we can.

Can I just confirm that this question related to Wave 6?

Best wishes,
Stephanie Auty - Understanding Society User Support Officer

#2 - 06/29/2018 09:38 AM - Lydia Palumbo

Thank you for your answer.

It is related to the waves of BHPS (from the 8th on) and the 6th of UKHLS.

- Status changed from In Progress to Feedback

- Assignee changed from Stephanie Auty to Lydia Palumbo

- % Done changed from 10 to 70

Dear Lydia,

The value 3 in these questions is labelled "doesn't apply" in the datasets and the questionnaire. This may be the case for example if someone is self-employed.

Best wishes,
Stephanie Auty - Understanding Society User Support Officer
